

KARTHICK N

SOFTWARE DEVELOPER

Chennai, Tamil Nadu | karthickn0305@gmail.com | +91 93612 18001 | github.com/Karthick-NP | linkedin.com/in/karthicknp

PROFESSIONAL SUMMARY

Detail-oriented aspiring Software Engineer (B.Tech IT, 2026) with practical full stack development experience across Java, Spring Boot, MySQL/Oracle, and React. Independently built and deployed a containerized full stack application to production, and contributed backend CRUD/REST development during an internship at Optimus Technocrates. Strong fundamentals in schema design, API debugging, Postman testing, and Git workflows — eager to contribute to a collaborative engineering team building scalable systems.

KEY SKILLS

Languages:	Java (Core Java, OOP), JavaScript
Back-End:	Spring Boot, REST APIs, Servlets, JDBC, Hibernate
Database:	MySQL, Oracle Database — schema design, queries
Front-End:	React, HTML5, CSS3, Tailwind CSS
Tools & Platforms:	Git, GitHub, Docker, Postman, Tomcat, Eclipse, VS Code
Other:	Debugging & performance tuning, code review, Agile, data structures & algorithms

PROFESSIONAL EXPERIENCE

Full Stack Development Intern | Optimus Technocrates

Nov 2025 – Dec 2025

- Implemented backend CRUD operations and business logic in Java, and set up and managed database connections to support them
- Built front-end UI components with HTML, CSS, and JavaScript to consume those APIs
- Tested and debugged REST API endpoints in Postman, fixing issues found during testing before merge, and went through code review on every change

PROJECTS

Student Management System — Personal Project

Java, Servlets, JDBC, MySQL, Tomcat, Docker

- Designed and built a Java Servlets/JDBC/MySQL backend managing 500+ student records — CRUD operations, dynamic search and filter, pagination, and BCrypt-based authentication
- Added CSV/PDF export and debugged query performance and edge cases through local testing before shipping
- Containerized the app with Docker and deployed it on Render, taking it from local development to a working production build

Secure Land Registration System Using Blockchain — Team Project (3 people)

Solidity, Web3j, Spring Boot, Oracle Database, React, Ethereum

- Designed the Oracle Database schema for off-chain property data in a 3-person team, working alongside Solidity smart contracts that recorded on-chain transactions via Web3j and Spring Boot integration
- Built roughly half of the React front end — property registration and ownership transfer flows — and integrated it with the backend REST services

EDUCATION

Bachelor of Technology, Information Technology

Ganesh College of Engineering, Salem (Anna University) | CGPA: 7.4/10.0

Oct 2022 – Jul 2026

LANGUAGES

English — Professional Working Proficiency Tamil — Native
